NATIONAL LIBRARY OF MEDICINE
BETHESDA 14, MD.

VOLUME II.

PHOTOGRAPHS No. 55 TO No. 104 INCLUSIVE.

WAR DEPARTMENT, SURGEON-GENERAL'S OFFICE,

WASHINGTON, D. C., *May 6, 1876.*

General J. K. BARNES,

Surgeon-General United States Army:

GENERAL:

The photographs herewith submitted are intended to indicate some of the older and rarer books in the National Medical Library, and are to be placed in the International Exhibition of 1876, in connection with the Catalogues of the Library, as the safest and most convenient means of showing what has been accomplished in the attempt made by this Department to form a collection of medical literature which should meet the demands of the physicians of the United States.

These photographs have been prepared under the supervision of Assistant-Surgeon J. J. Woodward, U. S. A., and are unusually successful. It must be remembered that many of these books are yellow with age, and that all yellow spots or stains appear in the photograph as dark or black spots.

These photographs may be considered as being arranged in three series.

The first series is taken from early printed books, the so-called "Incunabulæ," and from other works, which are rare, at least in this country.

The second series relates to Surgery, and especially Military Surgery; and the third series is from rare books and pamphlets connected with American Medical History.

Very respectfully, your obedient servant,

JOHN S. BILLINGS,

Assistant-Surgeon United States Army.

In Charge of Library.

LIST OF PHOTOGRAPHS ILLUSTRATING BOOKS

IN THE

NATIONAL MEDICAL MUSEUM,

UNDER THE DIRECTION OF THE SURGEON-GENERAL U. S. ARMY,

AT WASHINGTON, D. C.

An excellent Treatise of

Wounds made with Camliet, in which is corrected both
the greivous error of Therome Brunswicke, John Vega, Al-
fonso Ferrius, and others, in that they make the wound
venomous which cometh through the common
ponder : shot. And also there is set out a per-
fect and true method of curing these
Woundes. By Thomas Gale, and
published by Thomas Gale,
Master in Chirurgie.

Microcosmos (whom Man we call)
of two right noble parts is made :
The Soule, whose life is eternall,
and bodie eke which hence must vade,

This last part, doth the first containe,
so long as it in health endure :
Vntill sicknesse and all her traine,
doth proclaim watre, and death procure,

Now sicknesse quite for to expell,
Apollo hath this arte out set :
What arteles Master Gale doth tell,
whereby sicknesse force we may let,

The Canon shot (dreadfull and fell
like thunder bolts and fire flame)
How to remoue the waie, he tell
in this Treatise of worthie fame,

His name of right, Gale we may call,
for thus, Myke darke signefie :
An I to the world shew about all,
to do this Gale is the path way,

CERTIFICATE, &c.

GEN. TYLER, AND MR. LORD.

I JOHN TYLER, of Preston, in the county of New-London and State of Connecticut, hereby certify, that on or about the 17th day of June last, I was confined by a *Wound*, which I had before that time received *on my right leg, my groin, &c.*, in which I had taken cold; and at that time the fore was in a high state of inflammation, and gave me great pain, to such a degree that I had been obliged to keep my leg in a horizontal position, in a chair, the most of that 'day,—when Dr. J. B. Plummer, of Plimmet, called on me, and having operated on me a few minutes with his patent electric instruments, the pain in my leg wholly ceased, and the redness and inflammation of the wound entirely disappeared. I was free from pain that night, and indeed the redness and inflammation both ceased from that operation, and never returned again.

And I further certify, that my wife at that time was likewise afflicted with rheumatic pains in her hip, which had been upon her a number of years, and had affected her to such a degree as to render that side shorter than the other, and to make her unable at that time to raise herself from her chair without the greatest difficulty, or to walk across the room without leaning on her staff, and with that support, not without the greatest inconvenience; and Dr. Plummer operated upon her a few minutes, when she declared herself free from pain, and immediately rose from her chair, without any assistance or apparent difficulty, and walked several times across the room without aid.

Plimmet, June 1856.

ORIGINAL COMMUNICATIONS

Tetanus Tetani. By Prof. Jos. Jones, Surg.
P. A. C. S.

Choosing for publication in this number the following from a carefully and elaborately prepared paper now in the files of the Surgeon-General of the Confederate States, concerning the nature, history, pathology and treatment of tetanic tetanus, it is due to the author, Surg. Jos. Jones, P. A. C. S., to say that we hope to publish the entire article hereafter, in the near future; but as our readers must be content with only such portions as we think have a practical value in the treatment of this interesting, but usually fatal disease.

History of the case: Symptoms, &c.

Private General Hospital, Augusta, Ga., July, 1862.
No. 1. A Confederate soldier, age 37, dark complexion, tall and thin, weight 145 pounds; height five feet six inches; and strong in health. Muscles well developed, has been in the service of his country six months; previous to his occupation was farming.

At the battle of Secessionville, on James' Island, S. C., June 16th, 1862, whilst standing in a small house, and in the act of taking a cartridge from the box, a Minnie ball passed through a plank in the side of the house, three inches in thickness, and entering the lower part of the anterior fleshy portion of the right forearm, passed through the extensor and flexor muscles between the ulna and radius, splintering both bones, without, however, fracturing them across.

The wound suppurated freely, and appeared to be doing well, until July 6th, when the suppuration was sensibly diminished, and the patient complained of spasmodic twitchings and painful sensations in the muscles of the wounded arm and corresponding side, and along the spine, especially between the shoulders and in the region of the cervical and brachial plexus; stiffness and uneasiness about the muscles of the jaws, and painful sense and tightness about the cricoid cartilage; terror of the bowels, and loss of rest at night. The spasmodic contractions and twitchings of the muscles of the wounded arm were excited and increased by the slightest movements, and were especially aggravated by coughing, which was not only attended with great pain, but also with spasmodic contractions of the muscles of the thorax and neck. For several days previous the bowels have been constipated; and in like manner with this characteristic symptom, the
